NICK A. BARTOMELI

nick.bartomeli@gmail.com | 203.550.9808 | Shelton, CT USA

PROFILE

I am a distinguished technologist with a broad technical background, proven leadership skills, excellent communication ability, and multiple patented technologies who can quickly grasp new systems and concepts to exceed customer expectations. I have worked with all combinations of companies, large and small, customers both internal and external, projects that were publicly showcased at keynote events and others that never left the building – each combination posing an interesting set of new challenges for which to learn, adapt, and innovate. My ability to quickly grasp and model new concepts and industries has resulted in multiple patent applications and grants for inventions that have both immediately went into productive use and others which served as a basis for future systems to be built from.

TECHNICAL EXPERTISE

Analytics & Reporting
SAP tools & technologies
SQL, NoSQL, Mongo
HTML, CSS, Javascript
Node, React
AR/VR & Wearable Tech
Cloud, AWS
Docker, Containers
Git

SKILLS

Excellent Communication
Design Thinking
Experience Design
Research & Design
Scrum, Agile
Continuous Delivery
Microsoft Office
Open-source

WORKING KNOWLEDGE

Machine Learning & AI
Tensorflow, Python, R
Microsoft .Net
Java

PROFESSIONAL EXPERIENCE

2016 – Current | SAP Customer Experience | Product Owner – SAP Marketing Cloud

- Work closely with customers and partners to design, develop, and iterate on new applications for SAP Marketing Cloud relating to data management and analytics
- Deliver requirements and manage a prioritized backlog for multiple teams across 6 individual applications.
- Host webinars introducing customers and partners to our new applications. Communicate the business purpose and customer benefit of our solution both internally and externally.
- Motivate and foster collaboration amongst distributed development teams

2011 – 2016 | SAP d.Studio | Development Lead & Scrum Master – Build.me platform & SAP Scouting

- Lead a team of 10 to deliver high-value features and functions through continuous delivery for microservices-based cloud applications
- Aligned technical implementation and cross-functional features through both virtual and in-person collaboration of global workforce.
- Designed the core data model and integrated data model for SAP's first professional sports application and delivered beta version 90 days from inception.

2008 – 2011 | SAP BusinessObjects | Development Expert – Workforce Planning, Advanced Analytics

- Designed and Delivered the first commercial application on SAP HANA in 10 weeks, including requirements gathering, platform design, implementation, and all required release checks
- Increased analytics performance on EPM platform by 40x while adding advanced new features and predictive capabilities by adjusting data model and using modern development techniques

2005 – 2008 | Symphony Marketing Solutions | Senior Software Engineer – Platform

- Designed and delivered web-based reporting solutions based on loyalty marketing data, lead the adoption of Microsoft Analysis Services on their .Net stack to allow for advanced query techniques.

EDUCATION

Wentworth Institute of Technology
Boston, MA, United States.
Bachelor of Science, Computer Science
Magna Cum Laude

AWARDS / RECOGNITION

SAP Top Talent,
High Performer,
& Leadership Fast-Track
7-years running

PATENTS

I have been fortunate enough to work on exciting and cutting-edge offerings from SAP which were identified as important enough to protect through patents. The following patents have been awarded in my name, either as full or co-inventor with my distinguished colleagues.

- US8200666B2 & US8600982B2 – Providing relevant information based on data space activity items.
  - Semantic tracking of business users to automatically provide related information in context to their current work environment
- US8930831B2 – User interface generation based on business process definition
  - A type of "UI scaffolding" to build wizard/workflow style applications on top of free-form process definition following dynamic business rules
- US9965966B2 – Instructions on a wearable device
  - UX and technical design for translating step-by-step instructions to a wearable computer

Plus multiple additional applications pending
